**RCC Selected by Midland, Texas to Develop a Network Design  
Linking all City Facilities**

Woodbridge, NJ (July 12, 2011) – RCC Consultants, Inc. has been selected by the City of Midland, Texas to develop a network design linking all City facilities. The network will connect and support applications including traffic control systems, Voice over IP (VoIP), video surveillance and administrative data systems.

The current system does not provide adequate connectivity among City applications and departments, making communication and data sharing difficult. RCC will plan a new network that is capable of high-speed connectivity among all locations in the City. The project will include reviewing the existing fiber optic, wireless and leased line services before comparing alternative options for the upgrade. RCC will develop a conceptual design and high-level cost estimate for the network and VoIP system.

**About RCC Consultants, Inc.**

RCC Consultants, Inc. is a global telecommunications consulting, engineering and integration firm. A leader in the public safety industry since 1983, RCC specializes in the design and implementation of radio communications systems, microwave and fiber optic systems, broadband, intelligent transportation systems and emergency telephone systems, as well as the design of communications centers, tower sites and monitoring facilities.
