**RCC Selected by Augusta County and the Cities of Staunton  
and Waynesboro to Analyze their Public Safety Radio Systems  
and Transition to Interoperable Technologies**

Woodbridge, NJ (July 6, 2011) – RCC Consultants, Inc. has been selected by Augusta County, Virginia and the Cities of Staunton and Waynesboro to assist in the comprehensive analysis of their existing public safety radio systems. RCC will help develop a strategy to transition the current radio systems to new interoperable communications system technologies.

The existing radio systems lack the interoperability and advanced voice communications features available with newer technology upgrades. Current systems use out-of-date products, which will limit the system's functionality in the future as well as cause more expensive maintenance. The law enforcement, fire, and EMS agencies need to have efficient public safety radio systems to serve the County, which is one of the largest in the state.

RCC will work with the County and Cities to develop a strategy that will meet the needs of the areas' public safety agencies. Consultants will evaluate the existing system and determine necessary upgrades to ensure the system meets the FCC narrowbanding mandate. Narrowbanding is the requirement for users to switch to 12.5 kHz channels instead of the traditional wideband 25 kHz channels.

**About RCC Consultants, Inc.**

RCC Consultants, Inc. is a global telecommunications consulting, engineering and integration firm. A leader in the public safety industry since 1983, RCC specializes in the design and implementation of radio communications systems, microwave and fiber optic systems, broadband, intelligent transportation systems and emergency telephone systems, as well as the design of communications centers, tower sites and monitoring facilities.
